**Safety Precautions for Playing in Warm Weather**

You may be playing your matches in conditions to which you are not accustomed. The temperature and/or humidity can get quite high. If you follow the suggestions below, there is no reason why you cannot have good matches and a good time.

**YOU MAY WANT TO CONSIDER AN EARLY ARRIVAL IN ORDER TO ALLOW YOUR BODY TO BECOME SOMEWHAT ACCLIMATED TO NEW CONDITIONS.**

You will lose fluid from your body through perspiration. Along with water you lose sodium, potassium and other electrolytes. It is necessary to replenish your body with BOTH water and these electrolytes.

All athletes should drink plenty of fluids (water, sport drinks, juice, milk, etc.) throughout the day. If you wait until you are thirsty, you have waited too long. Note: your body can lose a lot of fluid, via evaporation, while you are flying since the air in the passenger compartment is very dry. You should drink 1 cup of non-caffeine or non-alcoholic drink per hour.

Drink another cup of fluid just prior to play. In fact, also drinking 16 to 20 ounces of water, juices, or sports drink 60-90 minutes before your match can further help in avoiding heat disorders.

Bring a large thermos with you on court and drink frequently (i.e., at every changeover). There will also be water available on the courts. Water and/or sport drinks are effective.

After your match, drink plenty of fluids. It could be water, Gatorade, lemonade, juice, etc. If you prefer, dilute any of these to your own taste. Water by itself does not replace necessary electrolytes. Don’t forget to eat! Fresh fruit and fruit juices are excellent source of some electrolytes and carbohydrates, but you may have to make a special effort to replace some salt as well.

Wearing white really can help in hot weather. Use cotton/polyester blends rather than 100% cotton or tightly woven nylon. Have an extra dry shirt available for change. Perspiration can block ventilation when the shirt is soaked and on humid days, the cooling of evaporation is of little significance.

Use sunscreen. Use waterproof/sweat proof sunscreen that blocks both UVA and UVB rays. Have an SPF of at least 15, but an SPF 30 or above is preferred. Wear a wide-brimmed hat that is well ventilated and shades the neck as well.

Remember, you are allowed 25 seconds between points and 90 seconds at the changeover. Use this time to recover. Take advantage of shade during changeover as much as possible. Change the shirt frequently (and shorts if necessary), and use a cool towel on the face and upper back.

**SIGNS AND SYMPTOMS OF HEAT DISORDER**

*Heat cramps*: muscle spasms, usually due to extensive and repeated sweat losses, fatigue, normal body temperature.

*Heat exhaustion*: extreme weakness, exhaustion, headache, dizziness, nausea, profuse sweating, chills and cool skin, normal body temperature, rapid pulse, sometimes unconscious.

*Heat stroke*: hot, dry skin, headache, nausea, confusion, staggering gait, extremely high body temperature, collapse, unconsciousness, sometimes death.

**IF ANY OF THESE CONDITIONS (#2 OR #3) SHOULD OCCUR:**

- Call a doctor or emergency vehicle. (Keep applying ice water continuously and generously until medical assistance arrives).
- Loosen the player’s clothing at once.
- Place player in a prone position in the shade.
- Apply ice to head and body (or whatever means are available to providing cooling).
Heatstroke and Heat Exhaustion

Exposure to high ambient temperature may lead either to excessive fluid loss and dehypovolemic shock (heat exhaustion) or to failure of heat mechanisms and dangerous hyperpyrexia (heatstroke).

Common sense is the best preventive; strenuous exertion in a very hot environment and insulating clothing should be avoided, and an adequate fluid intake is important.

**Heatstroke (Sunstroke)**

An abrupt onset is sometimes preceded by prodromal headache, vertigo, and fatigue. Sweating is usually but not always decreased, and the skin is hot, flushed, and usually dry. The pulse rate increases rapidly and may reach 160; respirations usually increase, but the blood pressure is seldom affected. Disorientation may briefly precede unconsciousness or convulsions. The temperature climbs rapidly to 41°C and the patient feels as if burning up. Circulatory collapse may precede death; after hours of extreme hyperpyrexia, survivors are likely to have permanent brain damage.

Old age, debility, or alcoholism worsens the prognosis.

Heroic treatment measures must be instituted immediately. If distant from a hospital, the patient should be wrapped in wet bedding or clothing, immersed in a lake or stream. The temperature should be taken every 10 minutes and not allowed to fall below 38°C to avoid converting hyperpyrexia to hypothermia.

The patient should be taken to hospital as soon as possible after the emergency methods have been instituted for further management.

Bed rest is desirable for a few days after severe heatstroke, and temperature liability may be expected for weeks.

**Heat Exhaustion**

Because of excessive fluid loss, this disorder gives adequate warning by increasing fatigue, weakness, anxiety, and drenching sweats, leading to circulatory collapse with slow thready pulse; low or imperceptible BP; cold, pale, clammy skin; and disorientation followed by a shock-like unconsciousness.

Syncope (faint) is a mild form of heat exhaustion and is precipitated by standing or a long time in a hot environment, eg. the soldier on the parade ground, and is due to pooling of blood in the heat-dilated vessels of the lower extremities.

Heat exhaustion is more difficult to diagnose than heatstroke, but its prognosis is far better unless circulatory failure is prolonged.

Treatment is aimed at restoring normal blood volumes and improving brain perfusion, thus the patient should be placed flat or with their head slightly down. When they start responding, small amounts of sugar water should be given.
HYDRATION TIPS FOR TENNIS PLAYERS

Drink cool water or sport drinks during play. Sports drinks are especially helpful during long matches, in hot weather and for recovery after play. Use a similar hydration routine before, during and after practice.

BEFORE PLAY
Drink 12-16 ounces about 1 hour before play begins.
Drink fluids often throughout the day.
Prepare at least 2 quarts (64 ounces) to drink during play.
Sports drinks are preferable for long matches or during play in hot weather.

DURING PLAY
Drink 4 to 8 ounces (4 to 8 normal swallows) after the warm-up and during every changeover.
Many players like to drink a sport drink and water, with an emphasis (e.g., 2:1) on the sport drink.
For some players, fluid requirements may even be higher in very hot or humid environments.

AFTER PLAY
Weigh yourself before and after play and drink about 20-24 ounces of fluid for every pound of post-play body weight deficit.
Immediately begin to replace fluid, electrolytes and carbohydrates with water, other fluids (e.g., juice, sport drinks, etc.) and food. Sport drinks are very effective if you are going to play again soon.
Consider adding salt to your food and/or drinks if sweat losses were extensive.
USTA League Tennis Regulations

The winner of the third set shall be credited with a set won and a game won. (3.03C)
The loser of the third set shall be credited with a set lost and a game lost. (3.03C)

Should the “Procedures in the Event of a Tie” go to GAMES, 3.03I (3), only the actual number of games played will be counted.
Example: With a score of 6-4, 4-6, 1-0, the winner shall be recorded with 10 games lost and the loser shall be recorded with 11 games lost.

NUMBER OF MATCHES SCHEDULED AND REST:
Events using the Set or Match tiebreak may schedule no more than three matches per day per team. A minimum of 30 minutes rest will be provided between matches. If a team/player enters more than one Division or event then these limitations shall apply separately to each.
